

Seamless clean-up solutions through expertise and automation!

To meet the demands of the industry, **Gilson** and **R-Biopharm Rhône** are collaborating to combine excellence in clean-up with the added benefits of automation. R-Biopharm Rhône are a trusted manufacturer and supplier of clean-up solutions in the food and feed industry for over 35 years. Gilson, globally recognised for quality, reliability and performance, have been manufacturing purification and liquid handling instruments for decades, and offers more than 65 years of expertise.

Together, this alliance provides customers with a complete end-to-end solution for fast, accurate and reliable purification.

R-Biopharm Rhône offer a flexible range of immunoaffinity columns for both mycotoxins and vitamins which offer several benefits to the customer, especially when combined with the **Gilson** ASPEC® 271 or ASPEC® 274 liquid handling systems.

- Concentration of the analyte of interest ensuring compliance with legislative levels.
- Improved clean-up guaranteeing that all interfering components are removed helping to provide low limits of detection.
- Superior clean-up removes the requirement for the use of matrix matched or isotopic labelled standards.
- All products meet Official Method (i.e., AOAC or CEN) specifications and results exceed method performance criteria giving analysts confident that results are robust and reliable.
- Optimised Application Notes are available to ensure the best possible results are achieved first time around.
- Full range of multi-mycotoxin immunoaffinity columns with simple methodologies minimising clean-up time.
- Bulk pack sizes are available, improving cost management.

274

Many laboratories are automating analysis to improve workflow and increase productivity.

When combining the benefits of immunoaffinity clean-up with automated sample preparation by Gilson's ASPEC systems, customers can:

- Improve productivity by reducing time at the bench.
- Have confidence in results first time around.
- Work with pre-programmed and optimised methods.
- Reduce time spent on validation.
- Ensure traceability of results.

Experience seamless clean-up integration with Gilson [ASPEC 271](#) or high-throughput [ASPEC 274](#) liquid handling systems for enhanced efficiency and performance.
